

## INCREASE VISUAL APPEAL WHILE MAINTAINING SECURITY

The SteelWeave Metal Mesh Grille complements and enhances any building design while still providing security. SteelWeave's woven **stainless steel** mesh material is a completely new grille design that exudes elegance. Its patterns transform a standard security item into a piece of rolling art.

The SteelWeave Metal Mesh Grille features a durable type 316 stainless steel curtain that provides protection for the people or objects behind it while still allowing visibility, even in the most corrosive environments. Optional security features are controlled by a master panel dependent on your choice of operator.

SteelWeave Metal Mesh is offered in three convenient models that are customized to meet the needs of your specific application. We offer the Aesthetic Reveal for designs meant to display the entire grille. The Aesthetic Conceal model provides a finished look that buries the perimeter of the grille. The Service model is for those areas that require functionality with a tight weave to eliminate small trespassers. The material, motor recommendation and components will vary based on model.

The SteelWeave Metal Mesh Grille is ideal for storefronts, malls, bars, restaurants, cafeterias, food processing and all other applications that require an aesthetically pleasing grille. It can also be used as a room or space divider.
